

## **ESO Department to Department Visit Programme 2019**

### **Host Institution: University Hospital of Bern**

#### **REPORT**

I am writing in appreciation for the ESO's generous contribution and support for my clinical practice in Bern University clinic. I found this experience extremely informative and instructive which motivated and inspired me for my future clinical work. I am very pleased that I had a chance to work with one of the prominent and professional professor- Urs Fischer and his hardworking and responsible team especially Mirjam Heldner. During my stay I acquired new valuable and practical skills. In the Emergency department, I was very impressed how fast the doctors were working and investigating a patient but without rushing the patient or the decision for thrombolysis and thrombectomy. I was in Stroke and intensive care unit, where I took part in the morning round with Prof Urs Fischer and other doctors, where they discussed each patient, and each case with investigations and treatment in great detail. I have been involved in multidisciplinary meeting with neuroradiologists , outpatient clinic with neurosonography. I am very delighted that I was integrated and became familiar with the organized and professional medical service. I will try to create and invest the same in my clinic and share my new knowledge with my colleagues and staff. I highly appreciate the team work as I saw how effective and useful it can be both for doctors and patients. I am grateful to all organizers of ESO, for their huge support and the opportunity which they give to young neurologists from different countries, allowing them to be involved in advanced medical clinics and research projects.

Sincerely

**Sofiya Khachaturyan, MD**
